Name of Your County or Home Economics Agent _____

A 4-H rabbit project requires little space and a minimum investment. A good place to house the rabbits, feed to keep them growing and a willingness to make the project a success are all that is needed.

The purpose of the 4-H rabbit project is to teach members proper ways to feed, manage and show rabbits. For those who have not raised rabbits before, it will be wise to start with young purebred animals from four to six months old. Usually two females (does) and one male (buck) of the same breed make a good start. The experienced rabbit raiser might want to purchase a bred doe of the medium-sized breeds.

Raising and marketing rabbits is an ideal project for many Florida 4-H Club members. This is especially true in urban areas and on small farms, where limited space might make other livestock projects impractical.

This book is for you to use in keeping your project records. Space is provided for you to keep track of your expenses, receipts, inventory of equipment and financial summary. You will also want a copy of the Florida 4-H Rabbit Manual, 4-H 9, available from your County Extension Office. The manual contains information about care and feeding of the rabbit.

PARTS OF THE RABBIT

Reproductive Data

Gestation period	30 days
Average litter size	
Californian, New Zealand, Satin, Chinchilla, Dutch Polish, Florida White.....	8-10
Breeding age	6 months
Weaning age.....	8 weeks
Reproductive life.....	1-3 years

Feeding

Rabbits should be fed a pelleted feed product once a day. These feed products need no supplementation although carrots or lettuce may be fed occasionally as treats. Does with young and growing young should be fed free choice. Mature does not in production and mature bucks may need to be limit-fed to avoid becoming too fat.

Housing

Medium breed rabbits should be housed in cages 30 inches deep, 48 inches long and 18 inches high. Growing rabbits or small breed rabbits

may be housed individually in a smaller area. Cages should be constructed with one-half inch by one inch wire floors. Housing should be constructed so that the animal is protected from the heat, wind and rain.

Breeding

At sexual maturity, does are mated to bucks by placing the female in the male's cage. If fighting occurs, the female should be removed immediately. Normally breeding takes place in 10 to 15 minutes, after which the doe is returned to her own cage.

Pedigrees

A written chart of the male and female ancestors of a rabbit including: parents, grandparents and great-grandparents of the rabbit; date of birth and ownership of the doe.

Rabbit Registration

A pedigreed rabbit may be registered upon reaching six months of age, providing it exhibits no disqualifying or eliminating characteristics as judged by a licensed registrar.

RECEIPTS

Keep a record of everything you sell, use at home or give away. List the date, how much you sold and the amount received. Receipts include the sale of rabbits and fertilizer (manure). Also show premium.

DATE SOLD	QUANTITY	ITEM	AMOUNT RECEIVED
TOTAL RECEIPTS			

INVENTORY

An inventory at the start and the close of the project is a necessary part of the rabbit record. The starting inventory is simply a list of all things which are on hand at the start of the project, together with their values. The closing inventory lists those items on hand at the close of the project, together with their values. Inventory items bought after the project starts will be entered as expenses to the project and in the closing inventory. Beginning inventory values are either: 1.) the amount paid, or 2.) in those cases where stock or feed was not purchased but was already on hand, the estimated market value.

DEMONSTRATIONS AND/OR TALKS GIVEN RELATED TO THIS PROJECT:

PICTURES AND/OR NEWS CLIPPINGS OF YOUR 4-H CLUB PROJECT

If possible, show the beginning of your project, your work being done and your completed project.

YOUR 4-H CLUB PROJECT STORY

In your story include as many of the following as possible:

1. What 4-H Club work has meant to you
2. What you have learned in this project
3. What safety practices you used in your project
4. How you managed your project
5. What you can do to improve your project next year
6. What you did to make the best better
